Portfolio: varshagk1.github.io/MY-PORTFOLIO | LinkedIn: Varsha GK

Professional Summary

Detail-oriented M.Sc. Data Science graduate with a strong foundation in statistics, data analysis, and data cleaning, backed by a Computer Science background. Skilled in Excel, Python, SQL, and Power BI, and built an end-to-end Employee Expense Claim Audit Dashboard that checks claims against policy limits, receipts, and risk levels. Seeking the **Risk and Compliance New Associate** role at Accenture to review employee expense claims for policy compliance, flag potential fraud, and support process improvement in a deadline-driven, team-oriented environment.

Education

VIT University, Vellore	2024 – 2026
Master of Science – Data Science	CGPA: 7.41
VIT University, Vellore	2021 – 2024
Bachelor of Computer Science	CGPA: 7.72

Key Skills

- **Audit & Compliance Support:** Expense claim auditing, policy compliance checks, receipt verification, duplicate-claim checks, risk classification, audit documentation
- **Office & Reporting:** Microsoft Excel (Pivot Tables, Pivot Charts, dashboards), Microsoft Office, Power BI, Tableau, Matplotlib
- **Data, Programming & Databases:** Python (Pandas, NumPy), SQL, Java, PHP, PyTorch, Django; MySQL, Oracle, MongoDB
- **Process & Tools:** Agile, Git/GitHub, REST APIs, Postman, Docker, VS Code, Jupyter Notebook
- **Industrial Data (Learning):** Time-series data fundamentals, AVEVA PI / OSIsoft PI
- **Soft Skills:** Time management, written and verbal communication, teamwork, ability to work autonomously, proactive and flexible attitude

Projects

Employee Expense Claim Audit Dashboard *Microsoft Excel, Pivot Tables, Pivot Charts*

- Built an Excel audit workbook that reviews employee expense claims (Travel, Food, Hotel) against a category-wise policy limit sheet, flagging each claim as *Within Limit* or *Exceeded*.
- Added audit checks for receipt availability and duplicate claims, with a risk level, audit status, auditor remarks, and resolution status (Completed / Pending Review) for every claim.
- Created a dashboard of pivot charts covering employee-wise, category-wise, policy compliance, and risk analysis, with KPIs for total claims, total expenses, high-risk claims, and claims requiring review.
- On the sample dataset of 10 claims (Rs. 53,200 total), identified 3 policy violations (30%), 2 missing receipts, and 4 high-risk claims (40%) pending review, and found Hotel to be the highest-spend category (Rs. 33,500).

Food Recognition and Calorie Estimation using Deep Learning *Python, PyTorch, Django*

- Built a CNN-based food classifier using transfer learning (ResNet18) with data augmentation and normalization, trained on 11 food categories and achieving about 92% accuracy on validation data.
- Mapped predictions to calorie values and built a Django web app (signup, login, image upload) that returns the predicted food, confidence score, and estimated calories in real time.

Online E-Learning Platform with Integrated AI Chatbot *PHP, MySQL, Flask, JavaScript*

- Built a full-stack e-learning web application with student sign-up and login, course catalog, enrollment and payment flow, lesson videos, quizzes, and an admin panel to manage courses, lectures, students, and payment status.
- Integrated an AI chatbot (Flask backend with the OpenAI API) into every page to answer learner queries in real time.

Certifications

- Deloitte Australia Data Analytics Job Simulation (Mar – Jul 2026)
- Innovating with Google Cloud AI (Jul 2026)
- Big Data Computing (Aug – Oct 2025)
